LOAN PROCESSING AI AGENT

PRODUCT DETAILS

Prepared by Webisdom AI

PRODUCT DESCRIPTION

A modular, multi-agent, AI loan processing ecosystem engineered to autonomously validate, interpret, and evaluate borrower documentation contingent on the loan type selected(home loan, personal loan etc). The system leverages advanced OCR and semantic information extraction pipelines to transmute unstructured document data into structured intelligence, subsequently propagating it through a hierarchical ensemble of specialized AI agents, including:

- AI-Based Data Extraction & Cognitive Insight Engine
- AI-Driven Underwriting & Quantitative Risk Assessment Module
- AI-Guided Remediation & Strategic Solutioning Framework
- Conversational AI Interface for Interactive Client Advisory

Built with secure file storage, audit trails, explainable scoring, and APIs for core banking / LOS integration.

PRODUCT OBJECTIVES

- Manual document handling and underwriting are slow, inconsistent, and error-prone; customers get unclear feedback and long turnaround times.
- The proposed system accelerates credit decisioning through automated document intelligence and AI-driven risk analytics, delivering standardized, data-centric evaluations
- It also reduces operational cost, lowers human-review backlog, and increases compliance and auditability.

RESOLUTIONS

- Reduces loan processing time, increases accuracy, and improves customer engagement.
- Deployable as SaaS or on-premises with secure APIs.
- Scalable for multiple loan products and adaptable to regulatory requirements.
